Governance Platform
– a flexible governance, risk, and compliance solution

knowit

Governance Platform a flexible and comprehensive governance, risk, and compliance solution that helps organizations stay in control, stay compliant, and work more efficiently.

A centralized approach to governance

Governance Platform brings together all core GRC activities in one unified environment. Instead of information being scattered across multiple tools and storage locations, everything is gathered in a single system where employees can work consistently and securely. This strengthens internal collaboration and ensures that reliable, connected data forms the basis for operational and strategic decisions.

Integrated GRC capabilities

The platform supports the entire governance lifecycle by combining:

- Risk management
- Compliance oversight
- Audit processes
- Incident reporting
- Third-party risk management

With a strong focus on clarity and ease of use, the solution helps both operational teams and leadership navigate complex requirements with greater confidence and structure.

Ready-to-use compliance frameworks

To help organizations onboard quickly, the platform includes pre-configured frameworks aligned with industry standards and internal policies. These ready-made structures reduce implementation time and streamline beginning to work directly with the system. Upon request, we also build new frameworks together with customers, which can be reused and individually tailored.

Real-time insight and decision support

Live dashboards and automated notifications give an immediate overview of the organization's risk and compliance situation. Leaders and teams can track trends, identify deviations, and act on realtime information, creating a more proactive and resilient governance culture.

Secure SaaS delivery in the Nordics

The platform is delivered as a SaaS service with data stored in Sweden. This ensures that all information stays within the EU/EEA and complies with strict data protection requirements. The solution is quick to implement and designed to integrate smoothly into ongoing operations.

Tailored modules for your governance framework

A wide range of functional modules makes it possible to build a GRC framework tailored to your organization's structure and processes:

- Risk and control management identify, assess, and monitor risks
- Audit management create an Audit Universe and execute audits efficiently
- Incident management enable fast reporting and analysis of incidents
- Process management gain an integrated view of processes, related risks, and key metrics

In addition, the platform supports KPIs, KRIs, GDPR compliance, and third-party risk management, ensuring a complete and cohesive governance ecosystem.

A foundation for stronger governance

Together, these capabilities make Governance Platform a powerful solution for organizations looking to simplify complex requirements and establish a transparent, compliant, and resilient governance structure. It transforms GRC from a reactive burden into an accessible and value-adding part of everyday operations.
